

The Sunflower II LED Dust Collector

System Features

- The Sunflower II uses HEPA-quality filtration with activated carbon technology. The filter is composed of three layers: the inner and outer layers capture dust and the middle carbon filter absorbs odors.
- The powerful LED allows for ideal illumination of the workstation. The portable Sunflower II comes with 2 filters and an easily adjustable base with a clamp mount.
- The Sunflower comes with a clamp and two filters.
- Other accessories sold separately: Pedicure Stand, Hole-through Mount, Screw-On Base, Suction Cup Mount, Inner Filter.
- The Sunflower II LED Nail Dust Collector is a high-powered, yet quiet entry-level source capture system. This compact, portable unit also extracts light vapors/fumes emitted from UV Gel Polish to protect the breathing zone of manicurists and their clients

Compact nail dust collector which also extracts light vapors from UV Gel Polish

The Sunflower II LED Nail Dust Collector is a compact, yet powerful, nail dust collector which also extracts light vapors from UV Gel Polish to protect the breathing zone of manicurists and their clients. The Sunflower II uses HEPA-quality filtration with activated carbon technology. The filter is composed of three layers: the inner and outer layers capture dust and the middle carbon filter absorbs odors.
